Which substance was ejected? Per-fly evidence (dye SNR, EPG green response, file-name label)

Color = call: orange ATP, purple dopamine, gray uncertain
Size = confidence: large high, medium, small low

confirmed: walking p2x2 0.5 s flies, ATP per Pablo (low ejection strength)
high: ≥2 votes agree, none conflict
medium: one strong vote, or agreeing weak votes
low: votes conflict

p2x2 flies called dopamine (high) get their own column in figures 1-5;
medium/low dopamine calls stay in their ATP group (see title counts).
