
closed loop, quiet-baseline turns: peak of per-fly mean trace (max over 0..median turn duration + 1.0 s) vs. turn size; faint = flies, thick = mean +/- SEM
fly heading peak
empty>kir (n=16 flies)
lpsp>kir (n=17 flies)
peak fly rotation (deg)
turn size (fly rotation)
bump peak
peak bump rotation (deg)
turn size (fly rotation)
bump/fly peak ratio
bump peak / fly peak
turn size (fly rotation)
